Introducing the MSR 060V...

Based on requirements from the members of the Reutech family, we have developed the new MSR 060V to enhance our current range of MSR systems.

The MSR 060V is a 600m operational range vehicle mounted system. Minimum mechanical modifications are required to the vehicle as all electronic and electrical systems are located inside the unit mounted on the back of the vehicle. The MSR 060V is a fully functional MSR system that provides all the normal MSR functions including the re-use of historical data via the Rapid Align™ function as well as all alarm functions. This implies that the new MSR 060V will integrate seamlessly into the mine operations where current MSRs are deployed.

The MSR 060V has completed its functional and environmental qualifications and are now in the production phase.

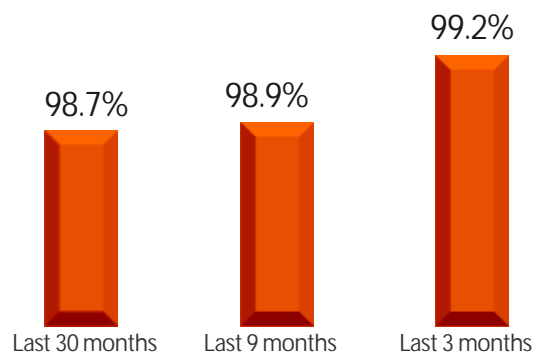

*Festive Season
Greetings*

We would like to thank all our clients for their loyal and continued support during 2011, and we look forward to expanding and developing our Reutech family in 2012!

Operational Availability

Reutech Mining has commenced with the installation of the new improved alternator, this is decreasing the generator related problems and is contributing to the increase in operational availability.

Global Distributor's Conference held in South Africa

The annual MSR Distributor's Conference was held in South Africa in November 2011. The Conference was held at Reutech Mining's head office in Stellenbosch, near Cape Town.

The team from l to r: Garth Day (Reutech), John Glisson (Rock), Jan de Beer (Reutech), Doug Minchin (Rock), Fernando Valenzuela (Clonsa), Gautam Bandopadhyay (ET), Marco Pacheco (Clonsa), Nolene Kritzingler, Elisma Lindes, Monique Lenhoff, Peter Bradshaw, Dirk van der Merwe and Alex Pienaar (Reutech). Absent: Greg Djouboulian.

The first day's session themes addressed the "past and current situation" and the "current situation and the future".

Gautam Bandopadhyay and Jan de Beer.

The second day's themes were "how to launch the future" and "working as one family".

The conference was concluded with a Safari trip to Aquila Game Reserve. Much needed relaxation and further bonding of our group was highlighted by wild animals viewing the Big-5 (Reutech, Mala, Rock, ET and Clonsa)!

Doug Minchin from Rock Engineering at the ostrich farm.

The theme of the conference was "Working as one family" and the aim was to create a platform where all MSR distributors can share and exchange ideas, get a first-hand introduction to Reutech Mining's marketing and management team and to discuss market trends, marketing challenges, plans and strategies as well as the way forward.

Greg Djouboulian, Mala.

...Safety and productivity through accuracy and reliability...

Slope Stability 2011

The recent Slope Stability 2011 conference that was held in Vancouver was a tremendous success. Reutech Mining is proud to have been a premier sponsor to this event and again congratulate and thank the organisers for the arrangements.

Reutech has received good feedback from its participation in the radar workshop that was held on Sunday 18 September. The Reutech presentation "Metrics for the selection of slope stability radar systems" provided potential users with a toolbox of questions and criteria to use in the selection of slope stability radar systems.

The MSR 060V was also revealed for the first time at this international event.

Reutech Mining is already looking forward to be part of the next in the series of Slope Stability conferences that is scheduled to be held in Australia in 2013.

Zambia's Copperbelt Mining...

Reutech Mining recently exhibited at the Copperbelt Mining and Commercial show in Kitwe, Zambia.

The company was joined by a number of other proudly South African companies which formed part of the Department of Trade and Industry's National Pavilion.

The show was held from the 1st to the 5th of June 2011 under the theme

"Prosperity on the Copperbelt" and attracted the interest of key stakeholders in the local mining industry as well as several high profile dignitaries such as former president Rupiah Banda.

Zambia contains almost 10% of the world's known copper reserves and it remains the country's primary resource. Copper output has increased steadily which can be

attributed to a host of factors, including the opening of several new open-cast mining operations.

Reutech Mining's Movement and Surveying Radar range of products attracted a great deal of attention and proved to be very popular among the local geotechnical, planning and surveying specialists.

Reutech Mining South America expands further in 2011

Reutech Mining has seen further growth in South America with more mining operations adopting the MSR technology as their preferred solution for real-time management of slope stability.

This is evident in Reutech's further expansion into Peru with a 3rd mining operation in this country. The growth has resulted in Clonsa Ingenieria (South American Distributor for Reutech) establishing offices in Peru to ensure timeous response to client needs and requirements.

The recent PERUMIN Exhibition, a prestigious bi-annual Expo and Convention, was attended by Reutech Mining and Clonsa Engineering. This important mining convention was held at the Technological Institute, Tecsup, located in the historical city of Arequipa.

It hosted more than 80 mining companies and hundreds of exhibitors who presented their technology, capabilities, projects and solutions in all areas related to the industry.

Garth Day, Reutech Regional Marketing & Sales Manager responsible for South America.

MSR User Conference for South America

Mid-year saw our User Conference for South America, which was held in Chile at the Hotel Club La Serena. The conference was attended by existing and potential new users of the MSR from Chile and Peru. At the event a number of Geotechnical representatives from El Romeral, Los Colorados and Kinross Maricunga presented where they shared their MSR experiences. This provided valuable information which will allow for further improvements to better serve this region.

One of Reutech's Software Engineers, Emile Rossouw, presented the newly improved software in detail to the delegates. The Technical Manager, Eduann Jacobs, was present and focussed on the requirements and suggestions made by our clients.

Garth Day, Reutech Regional Marketing & Sales Manager, and Marco Pacheco of Clonsa Engineering, spoke about the future vision with emphasis on ongoing developments and new technologies that are being incorporated into the geotechnical instrumentation, reiterating the commitment "to support the mining operation" and be part of the solution.

Acknowledgment and special thanks to CAP-Mining Division El Romeral who's Chief of Operations, Mr. Marcos Ramirez hosted a technical visit which displayed the primary characteristics of the radar in operation.

Reutech Mining in Europe...

Reutech Mining is constantly growing our global presence. With this in mind we have been actively pursuing various mining opportunities in Europe and the Commonwealth of Independent States.

The following conferences and forums were attended in these areas:

6th Annual Global Mining Technology Forum in Stockholm Sweden

This show was held in the Radisson Blu Viking Hotel in Stockholm. The theme was "Changes in the mining industry are evolutionary not revolutionary". Amongst the delegates were representatives from Scandinavia, Australia, China, Canada, South East Asia and India.

12th International Foundry Trade Fair GIFA in Dusseldorf, Germany

We joined a large South African delegation on our National Pavilion at this large-scale fair. The sure magnitude of this fair was enough to ensure all involved great opportunities with future business partners and customers.

4th Annual Central Asia Mining Congress in Almaty, Kazakhstan

Reutech Mining was an exhibitor at this congress in the wonderful city of Almaty. This being the region's only official government supported conference; we found it very valuable to assist us in our ongoing process of cultivating long-term partnerships with the top mining figures in the region. We were treated with local entertainment and celebrities at this beautiful venue.

Our growing family...

Reutech is proud to welcome the recent additions to our MSR family:

- ◆ Australia: Century, Koolan Island, Boddington, Granny Smith, Tallering Peak
- ◆ Turkey: Kisladag
- ◆ USA: Cortez
- ◆ South Africa: Voorspoed
- ◆ Botswana: Jwaneng
- ◆ Chile: Zaldivar
- ◆ Peru: Cuajone
